

Green Challenge

7 Teddy and Dora are both simplifying $\frac{30}{42}$

Teddy

$$\frac{30}{42} = \frac{15}{21} = \frac{5}{7}$$

Dora

$$\frac{30}{42} = \frac{5}{7}$$

- a) How do you think Dora was able to simplify the fraction in one step?
- b) Simplify these fractions in one step.

$$\frac{24}{30} = \square \quad \frac{16}{20} = \square$$

$$\frac{56}{64} = \square \quad \frac{99}{121} = \square$$

- 8 $\frac{\star}{\heartsuit}$ \star is a prime number. \heartsuit is a multiple of 10
The fraction can be simplified.
What could each number be? Explain your reasoning.
