

Marching Soldiers

Have you ever seen a parade with marching soldiers? Often, they are in very smart lines and rows. Their parades can help us create some arrays! An array is a way of representing a multiplication fact.

There are 8 soldiers in this parade (array). They are organised in two rows and four columns.

$$2 \times 4 = 8$$

$$4 \times 2 = 8$$

Look at the arrays below. Can you record the number of rows, columns and soldiers and a multiplication number sentence to go with each?

Use this space to record two multiplication number sentences.

Number of rows _____

Number of columns _____

Number of soldiers _____

Use this space to record two multiplication number sentences.

Marching Soldiers

Cut out soldiers and create your own arrays. Don't forget to record the number of rows, columns and the two multiplication number sentences.
