

Play Find My Match.

Place three different shapes on the table and then ask a friend to hold up one matching shape.

Which of the three shapes matches the one that your friend is holding up?

Add challenge by making the shapes more similar and changing the orientations.

You could also use these shapes to find matching pairs.

Or you could cut the cards out and play other matching games such as snap.

Ask a friend to create their own shape picture.  
Can you match and fill your shapes to recreate their picture?

Add challenge by using just the shape outlines to create the shape picture,  
rather than the coloured shapes.

Explore the different arrangements and shapes that you can build using a tangram.

First, you will need to cut out your tangram shapes from an A4 piece of paper.

Fold the paper to create a square and cut off the excess paper.  
Now cut out your shapes from this square.

Shuffle up your shapes. Can you place them all back in the correct place to make a square again?

What other pictures can you make with your shapes?  
You could ask a friend to make a tangram picture for you to copy.
